

# **Smart Contract Security Audit**

**Project: Anybuy** 

Oct 26, 2022

**Contract Address** 

0x2Ddf39a04e56CC99BC98eB63A17592120Be7483b

## **Table of Contents**

- 1 Disclaimer
- 2 Audit Review
- 3 Project Review
- 4 Smart Contract Vulnerability Checks
- 5 Manual Code Review
- 6 Owner Privileges
  - 6.1 Contract Ownership
  - 6.2 Liquidity Overview
- 7 Tokenomics
- 8 Social Media Check
- 9 Website Review
- **10 Audit Conclusion**

#### **Disclaimer**

The contents of this report reflect only the CRACKEN TECH audit team's understanding of the current progress and status of the security of the code audited, to verify the integrity of the code provided for the scope of this audit. You agree that your access and/or use, including but not limited to any associated services, products, protocols, platforms, content, and materials, will be at your sole risk. Given the size of the project, the findings detailed here are not to be considered exhaustive, and further testing and audit are recommended after the issues covered are fixed. We do not warrant, endorse, guarantee, or assume responsibility for any product or service advertised or offered by a third party through the product, any open source or third-party software, code, libraries, materials, or information linked to, called by, referenced by or accessible through the report, its content, and the related services and products, any hyperlinked websites, any websites or mobile applications appearing on any advertising, and we will not be a party to or in any way be responsible for monitoring any transaction between you and any third-party providers of products or services.

All information provided in this report does not constitute financial or investment advice, nor should it be used to signal that any persons reading this report should invest their funds without sufficient individual due diligence regardless of the findings presented in this report.

The review does not address the compiler layer, any other areas beyond the programming language, or other programming aspects that could present security risks. If the audited source files are smart contract files, risks or issues introduced by using data feeds from off-chain sources are not extended by this review either.

#### **Audit Review**

The source code of the Anybuy Token was audited in order to acquire a clear impression of how the project was implemented. The Cracken Tech audit team conducted in-depth research, analysis, and scrutiny, resulting in a series of observations. A detailed list of each issue found, and vulnerabilities in the source code will be included in the audit report. The problems and potential solutions are given in this report, we will identify common sources for such problems and comments for improvement.

The auditing process will follow a routine as special considerations by Cracken:

- Review of the specifications, sources, and instructions provided to Cracken to make sure
  the contract logic meets the intentions of the client without exposing the user's funds to
  risk.
- Manual review of the entire codebase by our experts, which is the process of reading source code line-by-line in an attempt to identify potential vulnerabilities.
- Specification comparison is the process of checking whether the code does what the specifications, sources, and instructions provided to Cracken describe.
- Test coverage analysis determines whether the test cases are covering the code and how much code is exercised when we run the test cases.
- Symbolic execution is analyzing a program to determine what inputs cause each part of a program to execute.
- Reviewing the codebase to improve maintainability, security, and control based on the established industry and academic practices.

## **Project Review**

#### **Token Summary**

| Parameter              | Result                                     |
|------------------------|--|
| Token Name             | Anybuy                                     |
| Token Symbol           | ABY  |
| Token Decimal          | 18   |
| Total Supply           | 200,000,000                                |
| Platform               | BSC  |
| Buy Tax Fee            | O%   |
| Sell Tax Fee           | O%   |
| Contract Creation Date | Oct 22, 2022                               |
| Liquidity Status       | Not Available                              |
| Liquidity Lockup Time  | Not Available                              |
| Compiler Version       | v0.8.7+commit.e28d00a7                     |
| Optimization           | No with 200 runs                           |
| Contract Address       | 0x2Ddf39a04e56CC99BC98eB63A17592120Be7483b |
| Deployer Address       | 0xf6cE657b6CD5dC469716d42b08437112AB94Ea68 |
| Owner Address          | 0xf6cE657b6CD5dC469716d42b08437112AB94Ea68 |

#### **Source Code**

CRACKEN was commissioned by Anybuy Token to perform an audit based on the following smart contract:

https://bscscan.com/address/0x2Ddf39a04e56CC99BC98eB63A17592120Be7483b

# **Smart Contract Vulnerability Checks**

| Vulnerability  | Auto-Scan | Manual-Scan | Result        |
|--|-----------|-------------|---------------|
| Unencrypted Private Data On-Chain                          | Complete  | Complete    | Low / No Risk |
| Code With No Effects                                       | Complete  | Complete    | Low / No Risk |
| Message call with hardcoded gas amount                     | Complete  | Complete    | Low / No Risk |
| Hash Collisions with Multiple Variable<br>Length Arguments | Complete  | Complete    | Low / No Risk |
| Unexpected Ether balance                                   | Complete  | Complete    | Low / No Risk |
| Presence of unused variables                               | Complete  | Complete    | Low / No Risk |
| Right-To-Left-Override control character (U+202E)          | Complete  | Complete    | Low / No Risk |
| Typographical Error  | Complete  | Complete    | Low / No Risk |
| DoS With Block Gas Limit                                   | Complete  | Complete    | Low / No Risk |
| Arbitrary Jump with Function Type<br>Variable              | Complete  | Complete    | Low / No Risk |
| Insufficient Gas Grieving                                  | Complete  | Complete    | Low / No Risk |
| Incorrect Inheritance Order                                | Complete  | Complete    | Low / No Risk |
| Write to Arbitrary Storage Location                        | Complete  | Complete    | Low / No Risk |
| Requirement Violation                                      | Complete  | Complete    | Low / No Risk |
| Missing Protection against Signature<br>Replay Attacks     | Complete  | Complete    | Low / No Risk |
| Weak Sources of Randomness from Chain Attributes           | Complete  | Complete    | Low / No Risk |
| Authorization through tx. origin                           | Complete  | Complete    | Low / No Risk |
| Delegate call to Untrusted Callee                          | Complete  | Complete    | Low / No Risk |

| Vulnerability                         | Auto-Scan | Manual-Scan | Result        |
|---------------------------------------|-----------|-------------|---------------|
| Use of Deprecated Solidity Functions  | Complete  | Complete    | Low / No Risk |
| Assert Violation                      | Complete  | Complete    | Low / No Risk |
| Reentrancy                            | Complete  | Complete    | Low / No Risk |
| Unprotected SELF-DESTRUCT Instruction | Complete  | Complete    | Low / No Risk |
| Unprotected Ether Withdrawal          | Complete  | Complete    | Low / No Risk |
| Outdated Compiler Version             | Complete  | Complete    | Low / No Risk |
| Integer Overflow and Underflow        | Complete  | Complete    | Low / No Risk |
| Function Default Visibility           | Complete  | Complete    | Low / No Risk |

## **Manual Code Review**

#### **Classification of Issues**

| Severity      | Description   |
|---------------|---|
| High-Risk     | A vulnerability that affects the desired outcome when using a contract, or provides the opportunity to use a contract in an unintended way. |
| Medium-Risk   | A vulnerability that could affect the desired outcome of executing the contract in a specific scenario.                                     |
| O Low-Risk    | A vulnerability that does not have a significant impact on possible scenarios for the use of the contract and is probably subjective.       |
| Informational | A vulnerability that has an informational character but is not affecting any of the code.   |

## **Findings**

| Severity      | Found |
|---------------|-------|
| High-Risk     | 0     |
| Medium-Risk   | 0     |
| O Low-Risk    | 0     |
| Informational | 0     |
| Total         | 0     |

# **Privileged Functions**

#### onlyOwner

| Function Name     | Parameters                                      | Visibility |
|-------------------|---|------------|
| approve           | address spender, uint256 amount                 | External   |
| Burn              | uint256 amount                                  | External   |
| decreaseAllowance | address spender, uint256 subtractedValue        | Public     |
| increaseAllowance | address spender, uint256 addedValue             | Public     |
| renounceOwnership | None  | Public     |
| transfer          | address recipient, uint256 amount               | External   |
| transferFrom      | address sender,address recipient,uint256 amount | Public     |
| transferOwnership | address newOwner                                | Public     |
|                   |   |            |

## **Contract Ownership**

The contract ownership of Anybuy Token is not currently renounced. The ownership of the contract grants special powers to the protocol creators, making them the sole addresses that can call sensible ownable functions that may alter the state of the protocol.

The current owner is the address 0xf6cE657b6CD5dC469716d42b08437112AB94Ea68 which can be viewed: HERE

The owner wallet has the power to call the functions displayed on the privileged functions list above, if the owner wallet is compromised these privileges could be exploited.

We recommend the team renounce ownership at the right time if possible, or gradually migrate to a time lock with governing functionalities in respect of transparency and safety considerations.

## **Liquidity Overview**

#### **Liquidity Information**

| Parameter           | Result   |
|---------------------|--|
| Pair Address        | Not Available  |
| ABY Reserves        | 0.00 ABY   |
| BNB Reserves        | 0.00 BNB   |
| Liquidity Value     | \$0.00 USD   |
| Liquidity Ownership | The token does not have liquidity at the moment of the audit |

## **Tokenomics**

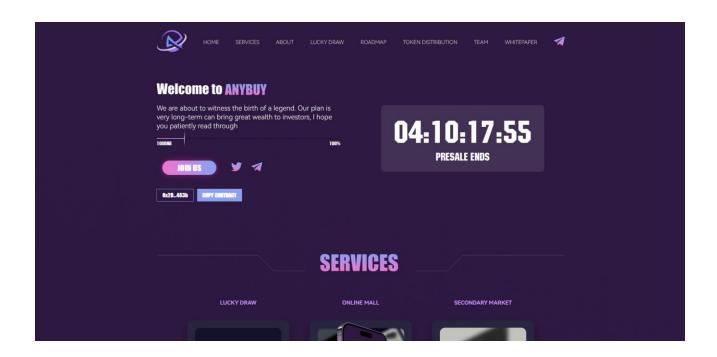

| Rank | Address                                    | Quantity (Token) | Percentage |
|------|--|------------------|------------|
| 1    | 0xf6ce657b6cd5dc469716d42b08437112ab94ea68 | 113,420,000      | 56.7100%   |
| 2    | 0xdfc7a8faf6016e72d33d8d5b0960c27d0a97ca3a | 86,580,000       | 43.2900%   |

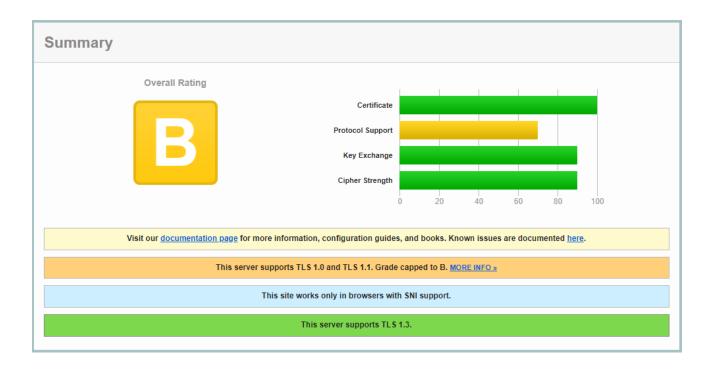

## **Social Media Check**

| Social Media Type | Link                                | Result  |
|-------------------|-------------------------------------|---------|
| Website           | https://anybuy.pro/                 | checked |
| Twitter           | https://twitter.com/AnybuyOfficial/ | Checked |
| Telegram          | https://t.me/Anybuy_Community/      | Checked |

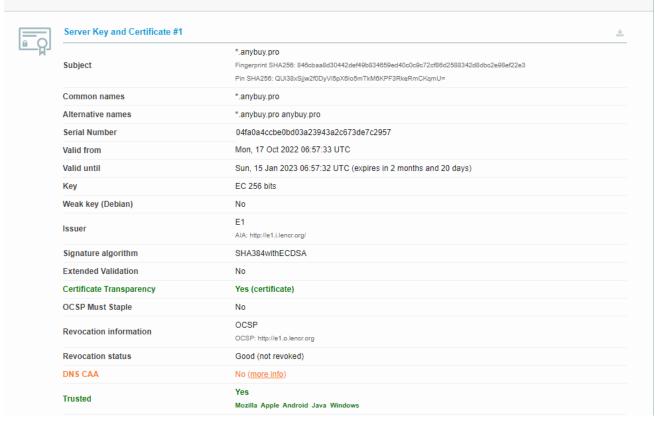

## **Website Review**

#### Certificate #1: EC 256 bits (SHA384withECDSA)

- Mobile Friendly
- Contains no code errors
- SSL is Secured
- No spelling errors

#### **Audit Conclusion**

- The owner cannot mint new tokens
- The owner cannot pause trading
- The owner cannot blacklist users
- The owner cannot change the max tx amount
- The owner cannot change buy/sell fees
   (The fees cannot be changed if the owner renounced the ownership)

#### **AUDIT IS PASSED**
